

Post surgical treatment

Scientific work presented at the 2nd annual Conference on Aesthetic Medicine, Milan (Italy) Nov 2000.

TOPIC: Penile enlargement Phalloplasty and post operative treatment using the Andro-Penis.

**R. Vaccari, MD, M. Musillo, MD, F. Pezzoni, MD.
Andrology Medical and Surgical Center, Milan (Italy).**

Surgical Procedures

1. PUBIC LIPOSUCTION;

Local anesthetic infiltration, pubic liposuction, and fat processing to prevent it's reabsorption after peneal lipofilling.

2. RELEASE OF THE PUBO-PENILE LIGAMENT;

The ligament is manually detached from the lateral fibers. Complete cut of ligament after careful hemostasis.

3. WOUND CLOSSURE;

This is carried out in layers with puboplasty techniques V-Y which allows the pubic skin to advance towards the base of the penis.

4. PENILE LIPOFILLING (body fat injection);

5. POST OPERATIVE GUIDELINES;

The Andro-Penis may be used 15 days after operation for a period of 2 months. Being just as important as the surgical stage, with the aim of avoiding serious complications such as penile fibrosis. The Andro-Penis in time provides a gradual enlargement of penis.
